Specification for Offshore Pedestal Mounted Cranes

This test shall be performed with the crane subjected to 1.33 times the onboard “maximum” rated load with a side load equal to 2% of the test load. Strain gauges shall be placed in locations to verify that the uniform stress levels in the crane major components are as established in the design calculations. Strain gauges shall also be placed in areas of peak stresses (transitions

Crane Planner 2.0 | Liebherr

The data displayed in Crane Planner 2.0 are determined by exactly the same calculation logic as the live data of the real mobile and crawler cranes. At the same time, important key figures such as ground bearing pressures, ground force, loads and centres of gravity are determined. A new calculation is carried out with every change in configuration, load or geometry.
